UNIVERSITY OF MICHIGAN.

It will become the duty of the Board of Revents, at their annual meeting next month, to elect a President of this institution.

The selection of this officer is a matter of deep interest to the people of this State, betion, whether the institution shall occupy the high station which its endowment and powers entitle it to; or whether its energies and capacities for usefulness, shall be wasted and worn away, until it becomes a scoff and by-word

among the people.

The President of the literary institution, gives tone and character to all its operations; he calls around him and organizes an administration; he is, or would be, the head, and animating spirit of its administration. If the President is a weak and inefficient man, the University, under his guidance, sinks into insignificance and contempt. If he is a strong, energetic, efficient man, the institution flourishes, and proves strong and useful under his influ-

In the first place, in selecting this most important officer, regard should be had to what he should not be.

And first, he should not be a politician, or in any way connected, or committed to a political party, so as to influence or warp his judgment in the conduct of the affairs of the University.

In the second place, he should not be a partizan of any religious sect, or so connected with, or committed to any religious denomination, as to lead him in any possible degree to make use of his position to advance the interests of his suit.

These are difficulties of a most delicate character, we know, but they must be met and disposed of by a fearless and unhesitating action, or they will become the rock on which the well being of our University will be wrecked.

We think it must be manifest to all thinking minds, that the moment this or any other literary institution, becomes a bone of contention, or a matter of speculation and use, for politicians or religious sects, that at that moment their doom is sealed; and its usefulness done. It becomes therefore of the first importance to guard, as far as possible, against this evil.

A respected correspondent handed us the foregoing for the Free Press, and as the views are well expressed, and embrace our own as far as he has gone, we cheerfully give it place.— The importance of the University to the people of Michigan, can not be over stated-and judicious men will readily appreciate the views expressed by our correspondent on the particular point touched upon by him. We are utterly opposed to all sectarianism in the management of the institution-because it cannot fail to impair its usefulness. The names of several persons have been mentioned in connection with the Presidency-the Rev. Joseph Penney, of Grand Rapids, late President of Hamilton College, N. Y .- and Hon. HENRY BARNARD, and perhaps others. We give no opinion concerning individuals-the principles upon which an appointment should be made, ought first to be [Det. Free Press.

PHILIP'S FIRE ANNIHILATOR .- A new invention, called Philip's Fire Annihilator is now in successful operation in England, and is attracting much attention in New York. A writer in the N. Y. Courier gives the following account of this wonderful invention:

"Philips' Fire Annihilator extinguishes fire without the use of water. The machines are of various sizes, depending upon the use to which they are required to be applied. Those ordinarily used for the protection of dwellings and stores, are about the size of a coal shuttle, and weigh about twenty pounds each. They are made of strong sheet iron, somewhat in the form visions are placed a number of chemical preparations, which, when brought into contact by a | items of trade to bring out the truth for 1851. simple mechanical contrivance, produce an immense amount of gaseous vapor or steam, which rushes out from an aperture in the cover, and fills the room. This vapor coming in contact with the flame, instantly extinguishes it; altho' it can be breathed with perfect impunity. A room that is filled with flame and smoke, so as to be inaccessible under ordinary circumstances can be readily entered with one of these machines in operation.

The annihilator instantly envelopes itself, and the person holding it, in an atmosphere which can be breathed, and at the same time keeps at bay, and extinguishes all flame in the apartment. I have not examined the chemical preparations, or the results of their combination, so as to state the precise chemical effect upon the flame in extinguishing it. But that such is the effect, no one can doubt, who has paid any attention to the accounts given in the English journals,-The London Times in giving a report of some experiments witnessed, says; Before this experiment was shown, Mr. Philips gave a sort of explanatory lecture on a smaller scale. He stated that the great advantages possessed by the gas employed by him over water were as follows: The gas was evolved at a temperature of about 160 degrees Fahrenheit, and came in contact with flame having a temperature of about 300 degrees, and under which temperature it could not exist. The gas absorbed part of this heat, and not only in proportion to its original volume, but expanded as much as a hundred times more, each part still retaining highly absorbent powers.

Now, water thrown into a body of flame only acted on the part immediately in contact with it, and although it might be used at, say 32 deg. Fharenheit, much lower than the gas, yet it was found that a very small portion assumed the form of vapor in coming in contact with flame, and spread through it; the greater quantity fell down by its superior weight, and was wasted. Mr. Philips then showed an experiment to prove this. He lighted coal gas in the hold of a model of a ship, and poured jug after jug of water on it without any effect, but immediately the vapor was brought in contact with it the flame was

extinguished. The cost of such a machine as I have mentioned, when charged, is about ten dollars, and can be re-charged for a dollar. One such machine is sufficient for the protection of any ordinary dwelling-house or store. Larger machines to run on wheels, and to which hose can be attached and used for large fires cost from two to three hundred dollars each.

The Sapreme Court of Mass. has given an unanimous opinion in favor of the constitutionality of the Fugitive Slave Law.

SIR JOHN FRANKLIN .- English papers received by the Europea make mention of some sup-

The report that a cairn of stones raised by Sir John Franklin's expedition had been discovered in Jone's Sound, in 1848, by the Prince of Wales Whaler, says the Liverpool Times, of the 14th, has received within this few days a very distinct confirmation, rendering the statement by far the most important-presumptive

or otherwise-which has reached us. William Miller, a seaman on board the Prince of Wales, states on oath that he was on board that vessel, (whaler) in 1848, when, early in September, during very thick weather, they entered, as they believed, Lancaster Sound, and steered west, advancing slowly. The fog con-tinued heavy for some days, when it suddenly lifted, and high land was seen on the larboard side, over the mast head. The captain being at first doubtful if it were the loom of the icebergs or of land, sent a boat off to ascertain the

fact, and of this party, Wm. Miller formed one. He states that on landing the marks of shoe rints were distinctly visible in the mud, above high water mark; close by us was a small cooking place blackened by fire, and a little further on a well built cairn about four or five feet high, of which the party pulled away a few stones, but being recalled by a signal from the ship, which was being driven in shore by the current,

were compelled to return on board immediately. It was believed by the master of the Prince of Wales, the veteran Lee, of Hull, that he had advanced in a westerly course up this sound, a distauce of nearly 150 miles, under the impression that he was in Lancaster Sound; but this belief was removed on making his way outward, and the doubt was confirmed by passing (to the southward) the wide opening, and the well known headlands of Lancaster Sound.

It became evident that he had been in the hitherto unexplored and more northern sound, named Alderman Jones, a passage which, it has been believed, leads directly into the sea north of Parry Island. Wm. Miller further declares that an open sea with Islands lay before them.

It is impossible to entertain a doubt that this cairn indicated the fact that some of Sir John Franklin's party have visited the spot in question; and we can have no hesitation in asserting that beneath the pile so carefully raised, is deposited distinct information of his past pro-

gress and future intention. We trust the hypothesis of the Liverpool editor will turn out a true one. At all events, here is a peg to hang another hope. Forlorn though it be, we trust that a vessel specially directed thither will be forthwith dispatched .-The Times says:-The point lies entirely out of the beat of any of those now employed upon the search, and will most likely not be ap proached by any of them; for although Sir John Franklin, being upon an exploring expedition, might have detached a boat party out of his direct course, those gone to seek him would naturally confine their search for traces of him to the route he was ordered to pursue, and thus be necessarily ignorant of the existence of that which we now write.

DOMESTIC TRADE.—The following is a representation of the commerce of the lakes—the interior trade of a single section of the Republic—a section which twenty years ago presented an unbroken forest and "desert waste of waters;" and even the Eric Canal threatened, for want of a National Bank, to turn into a solitude. Mark the teeming millions of industriof a pail with a strong cover, and with various compartments inside. Within these several dino more than fair to add twenty per cent to the | ton batts, wick and wadding, broadcloths, cassi-More than this must be added to meet the true condition of the commerce of this city with the East, more than one hundred per cent in

Forty millions of dollars more than the whole foreign export trade of the United States. [Det. Free Press.

Washington, June 26, 1851.

THE NEW PLANET SEEN AT WASHINGTON .-Lieut. Maury reports that the new asteroid Irene, discovered by Mr. Hind, in London, has been observed at the National Observatory, by Professor Keith, Benedict and Major, with meridian instruments, and the orbit computed for it from these and other observations. A brilliant meteor was observed in the constellation Scorpio last night at nine o'clock.

The alleged great fraud on the Government by means of a Mexican claim, has, it appears, awakened the attention of the Government at Washington, and an examination is about to be made into the affair. This is well; it certainly N. Y. Herald. can do no harm.

The Legislature of Connecticut adjourned sine die yesterday. The House, previous to the adjournment, passed a resolution endorsing the compromise resolutions, and sustaining the Fugitive Slave law, by a large majority; but the Senate declined to concur. It is this difference between the two branches which has prevented the election of a United States Senator. It is to be hoped that the next Senate will be wiser and more patriotic than that which has just adjourned. [N. Y. Herald, July 3, 1851.

Toronto, June 27.

HALIFAX, QUEBEC, & DETROIT RAILROAD,-Canadian Parliament .- It is understood, tho' not officially announced, that the government are prepared to extend liberal aid to the whole line of Railroad from Halifax, N. S., to Detroit, Michigan, via Quebec. An agent of Baring & Brothers is here, and it is understood that the whole loan can be obtained under the imperial guarantee, at three and a half per cent.

THE DROUGHT NEAR PHILADELHIA.-The country in the vicinity of Philadelphia is suffering in consequence of drought. Vegetation is much parehed. Milk has advanced in price one quarter of a cent per quart, in consequence of the scarcity of grass.

BREADSTUFFS EXPORTED .- The exports of breadstuffs from the United States to Great posed traces of this lost navigator, in regard to whose fate the whole world is so deeply interested. The fact that the health of the noblehearted lady Franklin is fast failing under her long and anxious suspense, lends additional interest to this report. The following is the account:

shipped two-thirds of the amount. Last year at the corresponding period, the quantity of flour which was exported to England was only 291,000 bbls., and of wheat, 430,329 bushels, but of corn, 3,782,430 bushels had been ship-
